Work Experience

Incident IQ

Atlanta, GA

QA Engineer

August 2021 - Present

- Worked as the only QA member of a feature team to analyse and compare branches of development against user/business requirements as well as create test plans and suites of test cases for feature work being developed in-sprint.
- Found and reported hundreds of feature and regression bugs, automated hundreds of end-to-end UI test cases with Cypress.js, and created unit and integration tests in the C# .NET framework for hundreds more test cases that were not covered with manual or automated tests.
- Led testing for large projects that affected thousands of users including a human resources online form platform, a transition from utilizing expensive SQL query processing on our app to inexpensive and fast Azure Cognitive Search, and a platform-wide upgrade of Permissions architecture.
- Performed manual and automated testing techniques (20/80) to validate a web application used by over 10 percent of US students (1000+ school districts country-wide). Testing techniques included load (JMeter), database (3T), API (Postman), unit and integration testing (C# .NET), and manual smoke and regression testing.
- Helped develop the automation framework (using Cypress.js). Integral player in creating reusable templates, converting test cases from Cucumber to TDD, and converting manual test cases into automated test cases in a suite of over 500+ end-to-end automated tests.
- Led an initiative to write hundreds of test cases in C# .NET to increase legacy code coverage, reducing customer-reported bugs in the application over the course of 6 months by over 40 percent.
- Recipient of the 2023 Winner's Circle Award, an internal company award given to only 10 employees company-wide that acknowledges individuals who consistently go above and beyond in their contribution, showcasing a relentless commitment to excellence and pursuit of success.

Gleim Publications

Gainesville, FL

Quality Assurance Analyst

October 2020 - August 2021

- Tested within the Agile development methodology to ensure that bugs found during the life cycle of the product's development were found and addressed quickly.
- Conducted both white and black box manual QA testing techniques depending on test requirements. Testing done includes regression testing, smoke testing, sanity testing, holistic testing, and stress testing, among others.
- Documented test results by creating test reports communicating results of testing to developers, project managers, and QA/QC administration.

Education

University of Florida

Gainesville, FL

B.A. in Political Science

Graduated in December 2019

- A.S. in Programming and Analysis included relevant technical coursework in Web Authoring, OOP, Software Testing, and Database Management.

Skills

Languages: JavaScript, C#, SQL, Python
Technologies: HTML5, CSS3, SASS, SQL, Git, Cypress.js, Postman, Jira (and other PM/Issue Tracking systems)

Personal Projects

Budgeter: A Budget App

HTML, CSS, Vanilla JavaScript

- Developed a budgeting app using the module pattern in vanilla JavaScript.
- Employed bubbling event delegation and event listeners to catch keypresses and clicks on the app.
- Implemented a local storage solution with the browser cache so that users' incomes and expenses are retrievable when they come back to the page.

Frogman Adventures

Unity Engine, C#

- Created a 2D platformer in Unity Engine with C with technical specifications, development progress, and milestones tracked in Trello.
- Developed and implemented game mechanics including player movement, lives, a high score system, fastest time system, and level progression.
- Utilized asset packs to create animations and levels using the tilemap editor.
- Created user interfaces that utilized TextMeshPro such as menus and dialog boxes.
- Debugged and resolved issues with game mechanics, gameplay, and performance to ensure smooth and engaging gameplay.
